Dedicated email hosting

No s***

A single on-board server means a single point of failure...

Using NDB's dedicated hosting servers alongside your on-board email server provides redundancy, enhanced threat protection and many more benefits.

Check your current email provider and ask if you are using a shared server - if the answer is yes, then you are compromising network security by sharing a server with other users and businesses

Shared Servers

Not recommended – Compromises security.

This means you share a server with other companies

- ✗ Increases threats into your network
- ✗ Higher probability of receiving spam
- ✗ Higher risk of virus outbreaks on your network
- ✗ Higher risk that email addresses are blacklisted
- ✗ Higher risk that emails are viewed by prying eyes

Dedicated Servers

Recommended – No sharing.

- ✓ Worldwide email access from any device
- ✓ Spam / virus scanned before hitting your inbox
- ✓ Share crew rota listings with shared calendars
- ✓ Collaborate with shared mailboxes
- ✓ No mailbox user limits and mailbox size limits*
- ✓ Daily backups performed by NDB technicians
- ✓ Message tracking and routing
- ✓ Full exchange functionality (if required)
